

## **MLIS Science Fair – In-Class Presentation**

As you are starting to wrap up your experiments and gathering data, it is time for you to start thinking about the final component of the project: The *In-Class Presentation*.

### **In-Class Presentation**

You will also have a **5-10 minute** in class presentation showcasing your experiment and everything that you have learned!

### **The presentation should include all of the following:**

- Ensure work and speaking is evenly divided amongst group members
- A PowerPoint or other media (enlarged pictures, video, etc.)  
Only relevant information is included → more pictures, fewer words!
- Engage with the audience (eye contact, ask them questions, etc.)
- Make sure you are well prepared, do not read off of your slides or notes
