# Parts of a Circle and Circumference <sup>(4)</sup>

## Warm Up (Review)

① Find the area.

$$A = \frac{1}{2} h (b_1 + b_2)$$

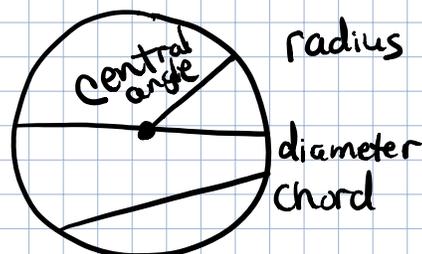

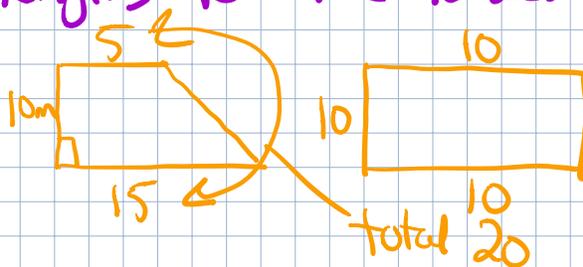

$$A = \frac{1}{2} (5) (22 + 18)$$

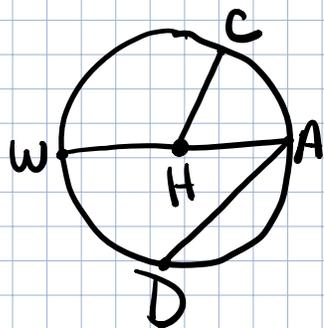

$$A = 100 \text{ in}^2$$

$$100(2) = 200 \text{ in}^2$$

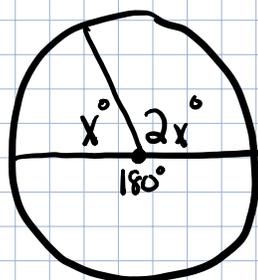

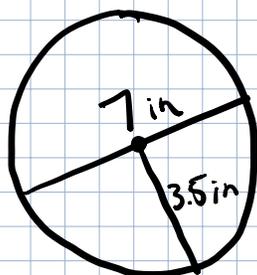

② The area of a trapezoid is  $100 \text{ m}^2$ .

The height is  $10 \text{ m}$ . Give two possible lengths for the bases.

$\odot H$   
 radius  $\overline{CH}$   
 diameter  $\overline{WA}$   
 chord  $\overline{AD}$

$360^\circ$

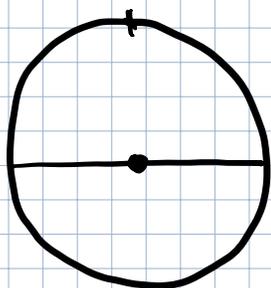

$$x + 2x + 180 = 360$$

$$x + 2x = 180$$

$$3x = 180$$

$$x = 60^\circ$$

Circumference = distance around the outside

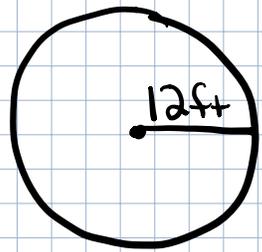

$$\frac{C}{d} = \pi \cdot d$$

$$d = 2r$$

$$C = \pi d \quad \text{or} \quad C = 2\pi r$$

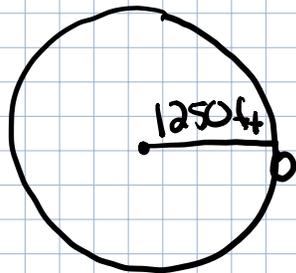

use 3.14 unless told otherwise

$$C = \pi d$$

$$C = 3.14(24)$$

$$C \approx 75.36 \text{ ft}$$

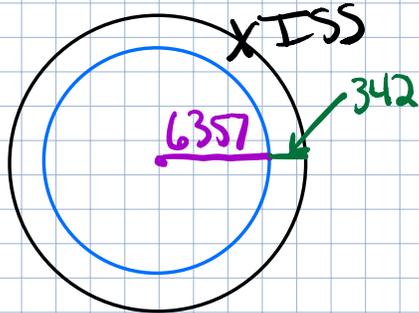

$$C = 2\pi r$$

$$C = 2(3.14)(1250)$$

$$C \approx 7850 \text{ ft}$$

ISS is orbiting 342 km above the Earth. The Earth has a radius of 6357 km. What is the distance the ISS travels in one orbit?

$$C = 2\pi r$$

$$C = 2(3.14)(6699)$$

$$C \approx 42,069.72 \text{ km}$$
