

# ***Saving an image from the Internet***

## **Learning objective**

We are learning to Save an image from the internet into a folder to improve organisation.

## **Introduction**

On most websites it is simple to save an image from a webpage. Just right click on the image and an option box will appear. Click Save picture as... The image can then be saved to a folder where it can be found easily. Save the image in the JPG or PNG format as these most widely used.

Sometimes the right click box will not appear because it has been disabled by the website. To overcome this use Screen print (Scr Prt) to capture the whole screen then paste it into a program like Word where it can be cropped and saves. The Paint app can also be used. Paint is the basic graphics programme provide with Windows, other programs may also be used. The image can be cropped in Paint and saved to a folder where it can be found easily. Use the jpg or png format as these most widely used.

## **Task**

Search the internet and find an image of a sea horse. Save this to your desktop folder.

Open a suitable new blank word document and insert the image.

Save the document into your desktop folder.
