# MATCH THAT PRICE!

## MONEY MATCHING activity

### PURPOSE OF THIS ACTIVITY:

This activity is designed to help children:

- ☑ Recognize and identify American coins (quarter, dime, nickel, penny)
- ☑ Learn the value of each coin
- ☑ Learn to add coins to a designated sum
- ☑ Increase awareness of shopping and buying various items

### PREPARATION:

- Print each page on cardstock and cut along lines to make coins and item price cards. Laminate for prolonged use and durability.
- You may add a Velcro dot to the back of each coin and each “empty coin square” on the item price cards. This will allow for improved adherence of coins.

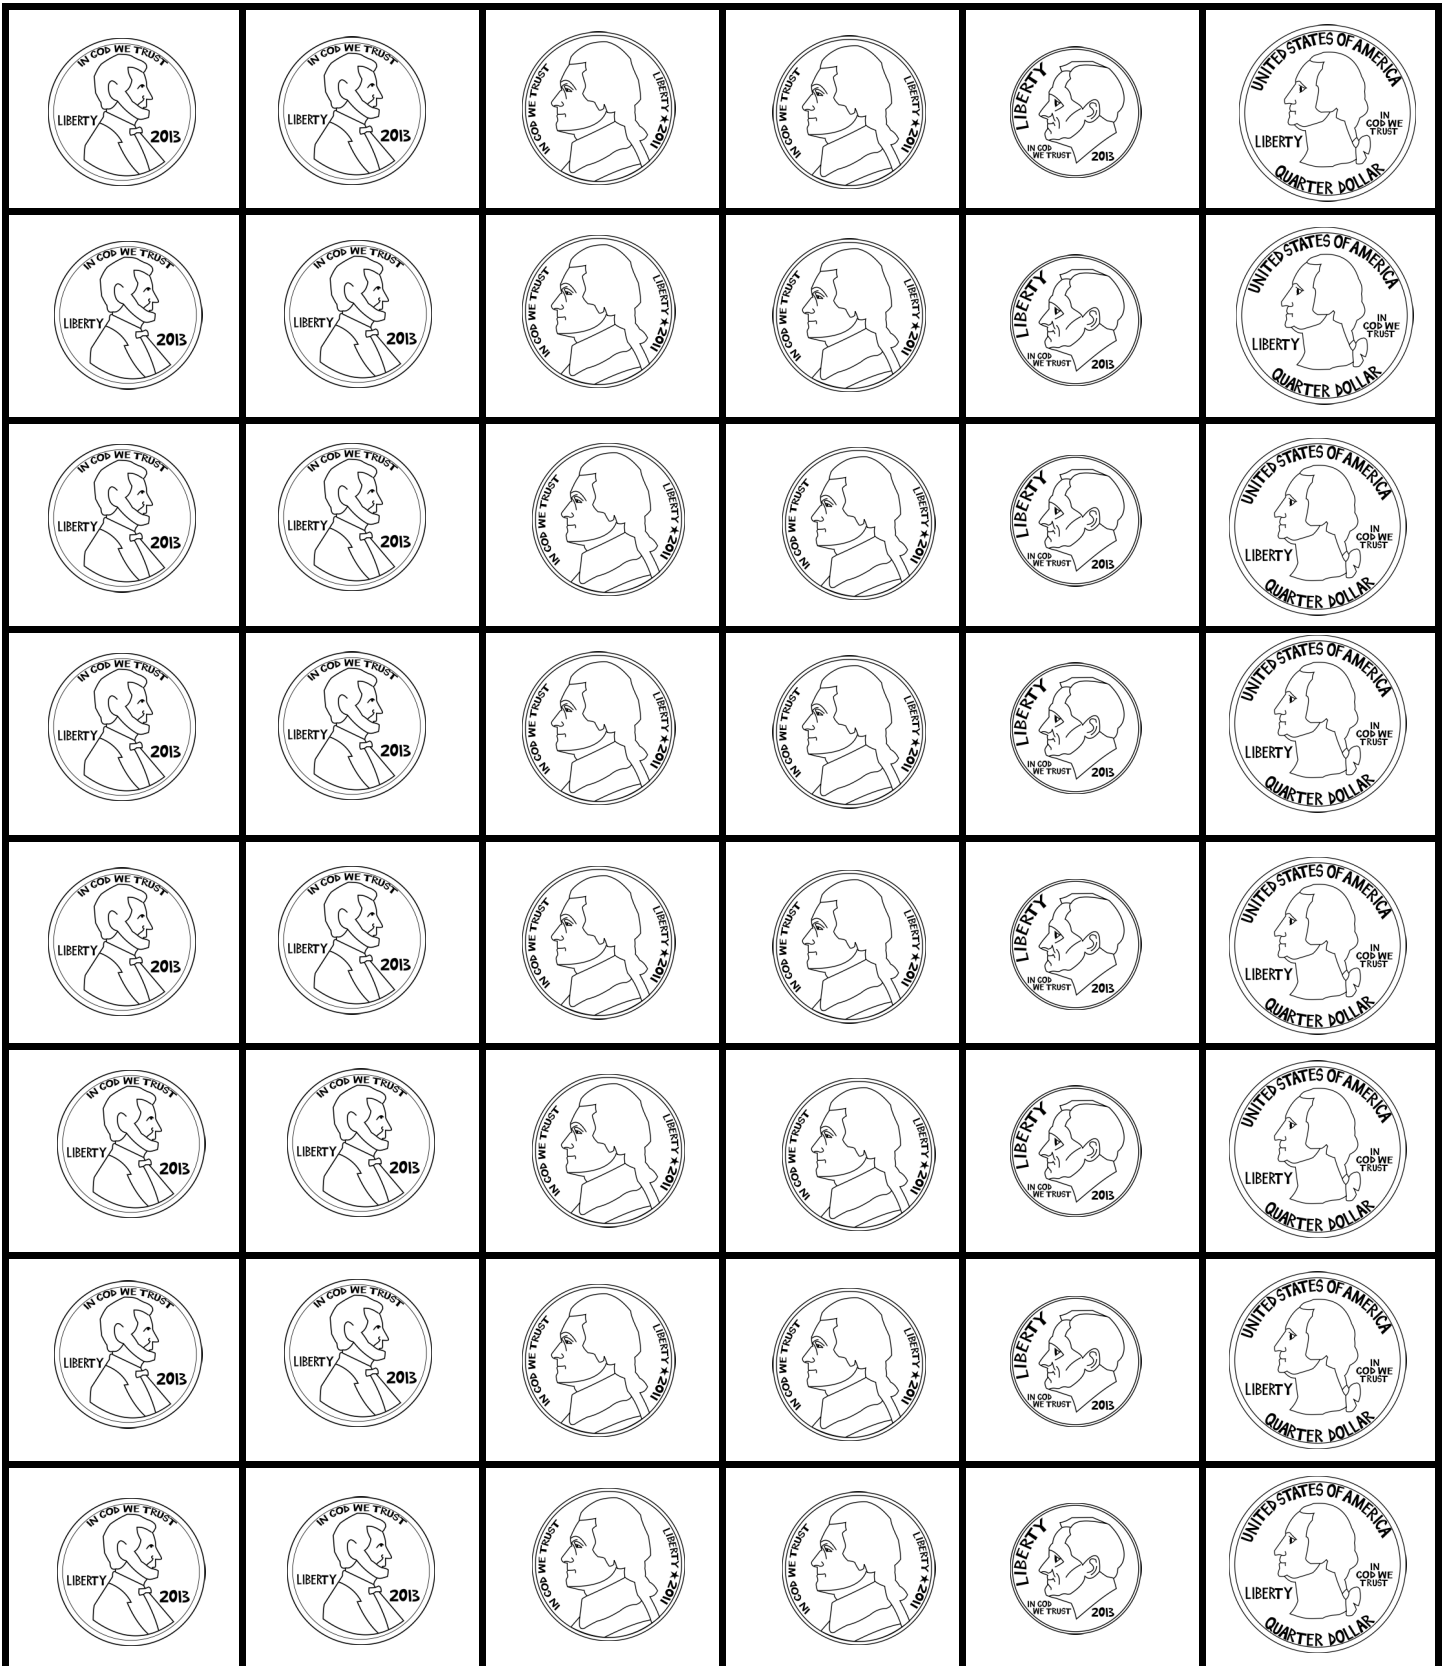

### DIRECTIONS FOR USE:

1. Provide child with prepared item price card and coins. Adult can provide child with wide variety of coins, or to simplify the task may provide only a few possible coins.
2. The child views the item image and reads the purchase price. Assist child to read as needed.
3. Item price cards with blank squares. The child will not have the benefit of a visual model. The child will need to select coin combinations that will add up to the specified purchase price of the item on that card. The coin combinations that will be used are dictated by the number of “empty coin squares” on that given card.
4. Child places selected coins onto coin squares.
5. Adult assists as needed.
