

Name of Visitor: Samantha Rector

Name of Teacher: Natalie Woods

I like.... I really like that you are using IXL to fill gaps from the Spring benchmark for STAAR. This will provide students with some practice with instant feedback in regards to comprehension and grammar. This is a great use of technology.

I wonder.... I wonder which units of study that you wish you would have taught differently this school year, if any?

Type of instructional strategy given by teacher: Flexible station rotation (floating teacher)

Student Engagement Level High Student Engagement Level

Comments or words of encouragement :) Students are all engaged in IXL or finishing up a post assessment on DMAC. I have been so impressed with your integration of administering post assessments in the DMAC platform this year! I bet they have served as better data sources for you to drive the instruction based on student needs. This would be something to note in your portfolio if you have not already! :)
